Native Species Seed Paper

Encourage native plant growth across North America.

Choose native species seed paper specific to your region when ordering promotional products!

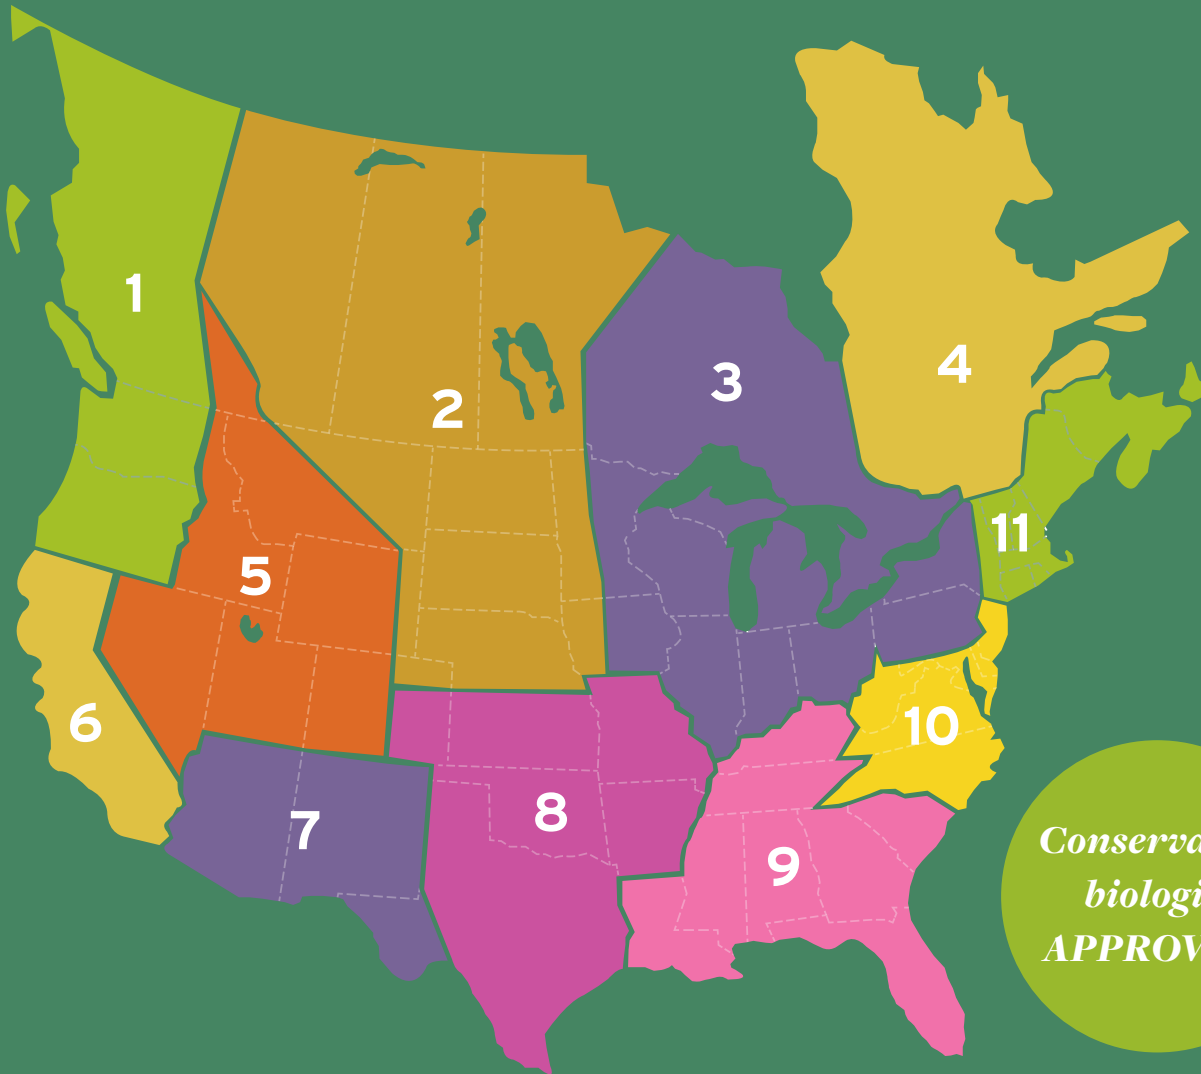

When your promotion is planted, you and your customers will be helping the local ecosystem by contributing to habitats for important species and pollinators like butterflies and bees.

Why spread native wildflowers?

As pollinator plants, wildflowers help support declining bee populations. They also help to create habitats for birds, butterflies and other insects in the community.

By choosing a native seed type specific to your region, you will be spreading the most suitable flowers to the region and helping local ecosystems.

Botanical PAPERWORKS

*Conservation
biologist
APPROVED!*
